

Dataset	Trace substrate	Reliable truth	Paper role
Open-SWE	Real software-agent traces	workflow, repo, owner-like	Main real-data evidence
tau-bench historical	Real tool-agent traces	workflow/session	Non-code external validity
Dataset B / T3	Real traces + controlled overlay	user / tenant / project	Trace-grounded mechanism
Synthetic A	Controlled generated traffic	full hierarchy + profile	Scale and difficulty controls

Claim strength follows the available truth: overlays and synthetic data are mechanism evidence, not real identity recovery.
